Web Programming

Lab - 10 Java Script

Name: Sushen Grover Reg No: 23BCE1728

Slot: L11+L12+L31+L32

Class No: CH2024250502774

Course Code: BCSE203E

Faculty: Dr. L.M. Jenila Livingston

Question 1:

Assume that you are appointed as Data Analytics Engineer for a hospital. Ages for 8
patients are given below.

P-Id	Name	Age
1	Alen	39
3	Deena	47
3	Diana	21
4	Jack	54
5	Jain	23
6	Kelvin	61
7	Louis	69
8	Rex	49

Write a JavaScript program using appropriate functions to

- (i) sort the data in descending order according to the patient's age and display the same
- (ii) check whether a particular P-Id is presented in the list
- (iii) filter the patients by age range.

Code: HTML

```
<html lang="en">

```

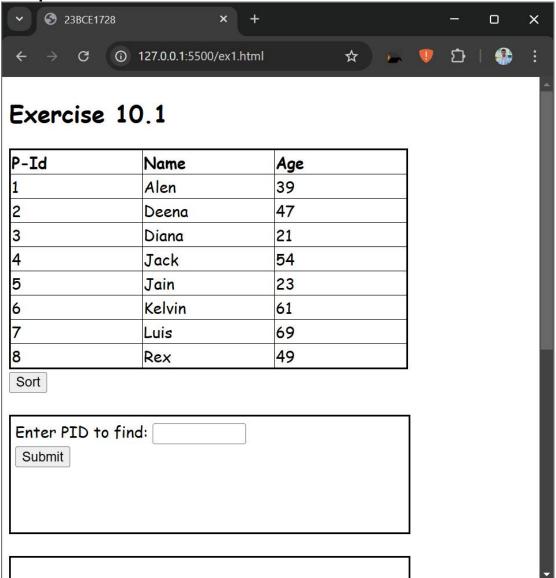

```
rangeInputs.forEach((i,index)=>{
    updateRangeValue(index);
    i.addEventListener('input',()=>updateRangeValue(index));
})
```

Output:

Question 2:

Write a JavaScript program that performs the following actions using different DOM selection methods:

(a) Using getElementById:

Select the <h1> element and change its text to "Updated Title".

(b) Using getElementsByName:

Select the input field with the name="username" and set its value to "John Doe". Select all radio buttons with the name gender and print the value of the selected radio button.

(c) Using getElementsByTagName:

Count and print the total number of elements on the page.

Select all <1i> elements inside the <u1> and print their text content to the console.

(d) Using getElementsByClassName:

Change the background color of all elements with the class input-field to lightblue.

(e) Using querySelector:

Select the first element with the class info and update its text to "This is the first info paragraph".

Select the first radio button with the name gender and check it programmatically.

(f) Using querySelectorAll:

Select all elements with the class info, loop through them, and print their text content.

Select all checkboxes with the class hobby, loop through them, set them as checked and print the checked values.

Code:

HTML

```
<html lang="en">
<head>
   <meta charset="UTF-8">
   <meta name="viewport" content="width=device-width, initial-scale=1.0">
   <title>23BCE1728</title>
</head>
<body>
   <h2>Exercise 10.2</h2>
   <h1 id="title">Original Title</h1>
   <input type="text" name="username">
   <input type="radio" name="gender" value="Male"> Male
   <input type="radio" name="gender" value="Female"> Female
   This is paragraph 1.
   This is paragraph 2.
       Item 1
       Item 2
```

```
<input type="text" class="input-field">
  <input type="text" class="input-field">
  Info paragraph 1
  Info paragraph 2
```

JS

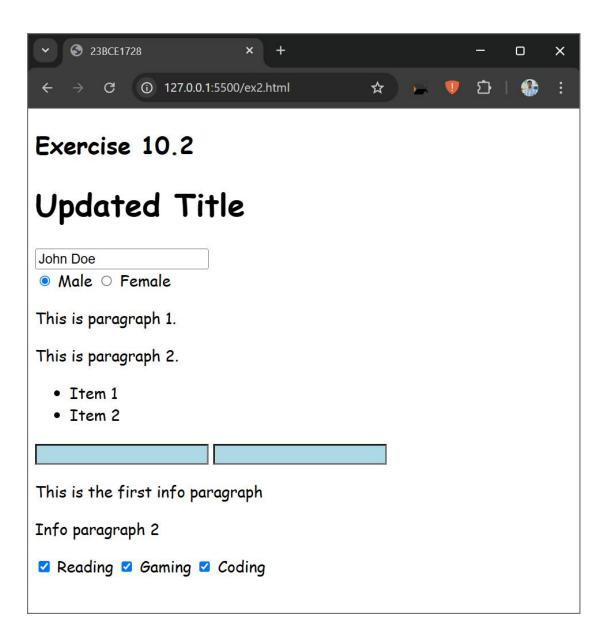

```
document.getElementById("title").textContent = "Updated Title";

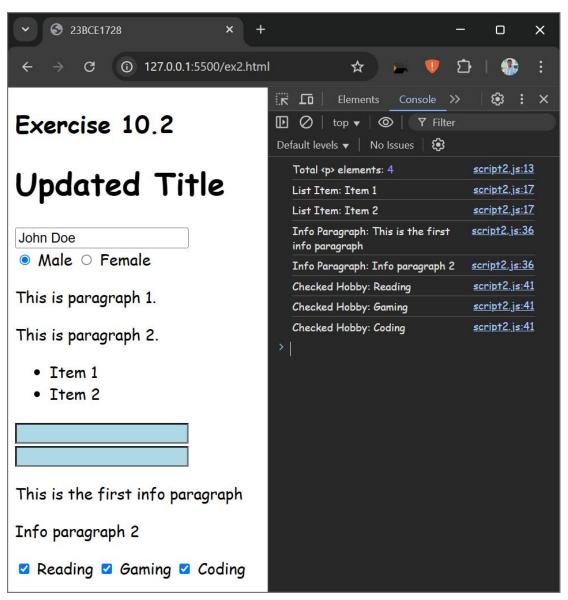

document.getElementsByName("username")[0].value = "John Doe";
```

```
const genderRadios = document.getElementsByName("gender");
```

```
(let radio of genderRadios) {
    if (radio.checked) {
        console.log("Selected Gender:", radio.value);
 const paragraphs = document.getElementsByTagName("p");
console.log("Total  elements:", paragraphs.length);
 const listItems = document.getElementsByTagName("li");
 for (let li of listItems) {
    console.log("List Item:", li.textContent);
 const inputFields = document.getElementsByClassName("input-field");
 for (let field of inputFields) {
    field.style.backgroundColor = "lightblue";
const firstInfoParagraph = document.querySelector(".info");
 f (firstInfoParagraph) {
    firstInfoParagraph.textContent = "This is the first info paragraph";
 onst firstGenderRadio = document.querySelector('input[name="gender"]');
if (firstGenderRadio) {
    firstGenderRadio.checked = true;
const infoParagraphs = document.querySelectorAll(".info");
infoParagraphs.forEach(p => console.log("Info Paragraph:", p.textContent));
const hobbyCheckboxes = document.querySelectorAll(".hobby");
hobbyCheckboxes.forEach(checkbox => {
    checkbox.checked = true;
    console.log("Checked Hobby:", checkbox.value);
```

Output:

Question 3:

Design an order form as below and implement a JavaScript program to pass the entries to another page and display the receipt.

Code: HTML ex31.html

```
<html lang="en">
   <meta charset="UTF-8">
